

ESSENTIAL VOCABULARY

Continent	Name the 5 continents Asia, Oceania, Europe, Antarctica, Africa, North America and South America
Ocean	Name the 5 oceans Pacific, Atlantic, Indian, Southern and Arctic
World map, globe, atlas	A map to show the earth. A globe is circular, an atlas is a book with maps on each page
Landscape	What you see in an area of land

Useful Information

Important things to know

1. Geographers go on journeys to cities, countries and **continents**. Many animals do too!
2. The continents' names are: Asia, Oceania, Europe, Antarctica, North America and South America.
3. Around each continent are seas and oceans. These are the Arctic, Southern, Pacific, Atlantic and Indian.
4. Some people live near to precious land animals, but we don't always care for wildlife like we should. What we do makes a difference.
5. **Penguins** and **elephants** are amazing. Their natural habitat is not in the UK, but you may see them in a zoo.
6. African elephants eat plants, can live a long time and are the largest land animal.
7. Small **sharks** live in the sea around the UK. Even whale sharks, which are the size of a bus and live around Australia in Oceania, are harmless to us.
8. Birds called **swallows** fly across the world. They fly over land, eating and drinking as they go, often not stopping until they reach the south of Africa.

By the end of this topic, I will be able to

- Recognise and name the Continents
- Understand that some of these continents have hot and or cold areas
- Describe physical and human features of these landscapes
- Use place knowledge to describe the habitat of a significant animal.
